Research
My general research interest is organic chemistry of marine and terrestrial natural products and chemistry of biologically and physiologically intriguing phenomena. More detail my research interest is as follow:

- Isolation and Structure Elucidation of Bioactive Compounds Derived from Terrestrial and Marine Organisms.
- Drug Discovery Research for curing deadly/infectious and rear disease.
- Marine and Terrestrial Chemical Ecology.
- Stereochemistry Determination using NMR, Degradation, Derivatization Reactions, QCC, CD, and X-ray Analysis.
- Discovery of New Reaction on the Basis of Degradation/Derivatization Reaction and Natural Product Synthesis.
- Chemical Biology
